

Ultimate Header Set-up Instructions

Note: To avoid possible injury keep hands and body at least three inches from hinges.

Place folding frame pieces on a flat surface. Open the frame legs by rotating them about the hinges. Push the legs together to lock the frame over the hinges. Position these two long frames legs with the magnets up. Slide corner inserts inside the frame.

Make sure all pieces are fully pushed together. Align magnets on end of header with magnets at end of frame. Roll the header onto the frame, line up magnets and gently push into place. Place complete header and header frame on top of display with extended hooks going over top of display. Be sure the hooks are on top of the pop-up frame. The display panels (ie, the walls) will not support the header.

Shown at right the header hook from the back side of the display. The hook must be on top of the pop-up frame not the graphics
